EXPERIENCE AND PROJECTS

■ Ha.ckathon, Independent Project

Ha.ckathon.com is a website I built that would sort and search for hackathons based on a user's location and preferences. I built the website with node.js and utilized an email list to continue user retention. I plan on expanding the site later on.

Metrics: 400 visitors/day | 20 email subscribers/day

■ WebAware, Web Development in Winter 2015 - 16

WebAware is a real time analytics company that products include real time database software and privacy analysis. During my employment, I was able to work with their CTO in building demo applications using their real time database software. Including a chat service and delivery tracking tool.

Results: 2 Cool Demos | Experience working with new technology.

■ Infinera, Intern turned Remote Engineer in 2015-16

Infinera is a WDM optical transmission equipment manufacturer. I was hired as an intern under their marketing department under a student program. During my internship I was able to build a competitive buisness tool to integrate company datasets for the company's sales team. Infinera enjoyed the product and decided to continue by employment under a remote engineer position to continue working on the product.

Fun Facts: 50 bugs fixed | 90 new networking gear words learned

■ Entite, Contractor to Partner from Fall 2015 - 2016

Entite is a Chinese-Canadian design firm based in Shanghai. As a freelancer in my first semester of University, I was hired to build out their website by building a custom wordpress theme that would work both for their English and Chinese website. I joined later as a partner working on client website in January.

■ DataStack, My own Startup with Seed Capital

DataStack is a startup I built with two of my friends. I currently operate as the CEO but also the main programmer of platform. DataStack is a buisness intelligence tool that aggregates corperate data from anywhere. We've raised 5,000$ with $10,000 on it's way in seed capital from various investors with less than 1% equity given away.

■ HubYard, Social Media Management for Open Source

HubYard was my first major project that I started in my junior year of high school. HubYard was a social media management platform that was built ontop of node.js and later open sourced in 2013. It had at a peak 11,000 users.

SKILLS

Illustration
Node.js
Javascript
Java
JQuery
Web Design
MongoDB/ArangoDB
PostgresSQL/SQL/mySQL
Wordpress
PHP
API Development
Photoshop/Illustrator
DevOps
C++

LEARNING

Swift
C
Character Design
Animation
Assembly
