technology

HTML5/CSS3 (Bootstrap, Foundation, Sass)	Excel (VBA/Macros)	SQL
Javascript (JQuery, AngularJS, Ionic, GSAP)	Tableau	Oracle
Python (Flask)	IDEA Caseware	

projects

Stock Watch App git.io/vrVDU

Created a web application that pulls real time market data from Yahoo Finance. Users can login and add stocks to their personalized watch list. Quotes are automatically updated so no manual reloading of data necessary. Search box features an autocomplete function that provides suggestions as the user types their quote.

HTML5/CSS3, Javascript (JQuery, JSON), Python (Flask), SQL

Women in Science Website bit.ly/28T6ddL

Developed a new site for the WIS organization at Western University. The website is built with the Foundation framework and features animations using the GreenSock API. The website is scheduled to be launched in late August but here is a preview I have attached to my own site: **bit.ly/28T6ddL**

HTML5 /CSS3 (Foundation, Sass), Javascript (GSAP, JQuery)

DropChat Mobile App Front end git.io/vrsPj

Developed front end technology for location based chatroom app. Users can create chat rooms by zooming in and out of the map view to specify its radius and set other chat room details.

HTML5/CSS3, Javascript (JQuery, Ionic), Photoshop

Financial Calculator git.io/vrsXH

Built calculators into a spreadsheet to perform complex computations. Designed a minimalistic UI for ease of use. Some calculators include: depreciation schedule creator, Black-Scholes pricing

Excel VBA, Macros
